NEST

We accelerate mind and body recovery
by connecting the human body with AI.

About NEST

NEST develops an ECG-based emotional and autonomic AI platform that interprets human inner states in real time. We connect Wearables, AI, and Healthcare into a seamless flow, aiming to build an integrated ecosystem where humans and AI interact naturally and meaningfully.

Introducing AI(AANV)

NEST's AANV engine transforms raw ECG into real-time vectors of emotional and autonomic change, revealing patterns that conventional HRV analysis cannot capture. Our AI interprets these dynamic signals to anticipate rising stress and guide personalized regulation, bridging human physiology and intelligent systems in a unified platform.

MIND EASE

Dimension / 63 × 14.1 × 29.5 (mm)

The device performs personalized AI calibration to precisely interpret autonomic changes from ECG signals and detect subtle shifts in emotional state. It delivers tailored stabilization and recovery support through an intelligent wearable system.
